Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Low pressure near the central California coast continues to pull moist unstable air into Northern California. Showers and wet thunderstorms are expected again today and this evening, but there won't be as much lightning as there was on Tuesday. The most active area will be in the east, but isolated activity is expected in the west as well. A direct hit from a thunderstorm could yield 0.25-0.50 inches of rainfall. On Thursday a low pressure trough and cold front will move in from the north. Gusty south-west winds (25-35 mph) and more showers and wet thunderstorms will occur in eastern areas along and ahead of the front as it moves southward during the afternoon and evening.

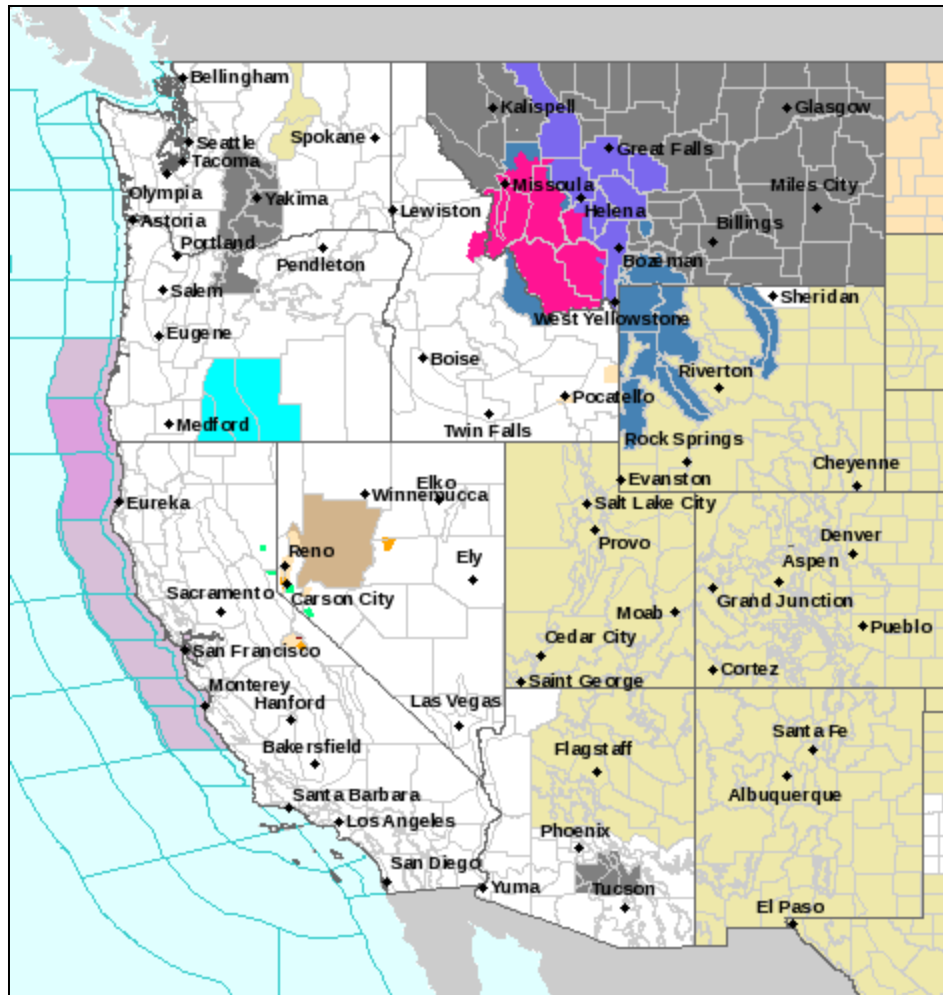

On Thursday night and Friday northwest-northeast winds will gust to 25-30 mph in wind-prone areas west of the Cascade-Sierra crest as cooler and drier air moves in behind the front. A weak dry low pressure trough will pass through Northern California Saturday, and a stronger low pressure trough and cold front will reach the north coast late Sunday. Ahead of this strong front south-southwest winds will gust to 30-40 mph over the higher terrain and east of the Cascade-Sierra crest. The front and trough will move through Monday-Tuesday with gusty southwest-northwest winds. Rain and high elevation snow are possible across the northern half of the region, along with isolated thunderstorms.

SOUTHERN CALIFORNIA

The upper level low which has been responsible for the convection the past few days will finally move eastward today and Thursday as a trough moves into the area. This will result in a decrease in shower and thunderstorm activity, and after Thursday, no precipitation is expected throughout the forecast period. Today, there will be a chance of showers and wet thunderstorms in the Sierras westward into Monterey County as well as the deserts north of I-15. Thursday, only a handful of storms may occur near the Crest during the afternoon. Much cooler temperatures are expected over the next few days as moderate to strong onshore flow develops. High temperatures today will be 3-5 degrees cooler, and by Friday, look for valley temperatures to only reach the upper 70s to the lower 80s in the valleys to the mid 90s in the desert. Gusty west winds of 20-30 mph will be possible during the afternoon hours in the Kern County Mountains, the Antelope Valley, the Banning Pass and the eastern side of the Cleveland National Forest Thursday and Friday. Look for marine layer cloudiness to increase with stratus possibly reaching the lower coastal slopes by Friday morning. This weekend, temperatures will warm a bit and winds will become light. A deeper trough may bring even cooler weather to the region next Tuesday along with strong winds in the mountains and deserts as well as the Owens Valley. Offshore flow may be possible at the end of next week, marking the start of autumn.
